

5V/1.5A Output Synchronous Boost in SOT23-6

DESCRIPTION

The ETA1038 is a high efficiency synchronous step-up converter that can provide up to 1.5A to a boosted output up to 5V from a low voltage source. Unlike most step-up converter, it incorporates circuits that disconnect the input from output, during shutdown, short-circuit, output current overloading, or other events when output is higher than the input. This eliminates the need for an external MOSFET and its control circuitry to disconnect the input from output, and provides robust output overload protection. A switching frequency of 1MHz minimizes solution footprint by allowing the use of tiny and low profile inductors and ceramic capacitors. An internal synchronous MOSFET provides highest efficiency and with a current mode control that is internally compensated, external parts count is reduced to minimal.

ETA1038 is housed in a tiny SOT23-6 package.

FEATURES

- ◆ Output Disconnect
- ◆ Short-circuit Protection
- ◆ 5V/1.5A Output Power
- ◆ Output to Input Reversed Current Protection
- ◆ Up to 96% Efficiency
- ◆ 40 μ A No load I_q and light load PFM Mode
- ◆ Internal Synchronous Rectifier
- ◆ Current Mode control
- ◆ Logic Control Shutdown and Thermal shutdown
- ◆ SOT23-6 Package

APPLICATIONS

- ◆ USB OTG for MIDs, Smartphones
- ◆ Mobile back-up Battery Chargers
- ◆ Alkaline, NiCd, and NiMh batteries applications
- ◆ USB powered devices

ORDERING INFORMATION

PART	PACKAGE PIN	TOP MARK
ETA1038S2G	SOT23-6	AIYW <small>YW=Date Code</small>

TYPICAL APPLICATION

Typical Application Circuit

PIN CONFIGURATION

ABSOLUTE MAXIMUM RATINGS

(Note: Exceeding these limits may damage the device. Exposure to absolute maximum rating conditions for long periods may affect device reliability.)

SW Voltage.....-0.3V to 6.0V

All Other PIN Voltages.....-0.3V to 6V

SW to ground currentInternally limited

Operating Temperature Range-40°C to 85°C

Storage Temperature Range-55°C to 150°C

Thermal Resistance θ_{JA} θ_{JC}
SOT23-6.....180.....90..... °C/W

Lead Temperature (Soldering, 10sec)260°C

ESD HBM (Human Body Mode)2KV

ESD MM (Machine Mode)200V

ELECTRICAL CHARACTERISTICS

(V_{IN} = 3.6V, V_{OUT} = 5V, unless otherwise specified. Typical values are at T_A = 25°C.)

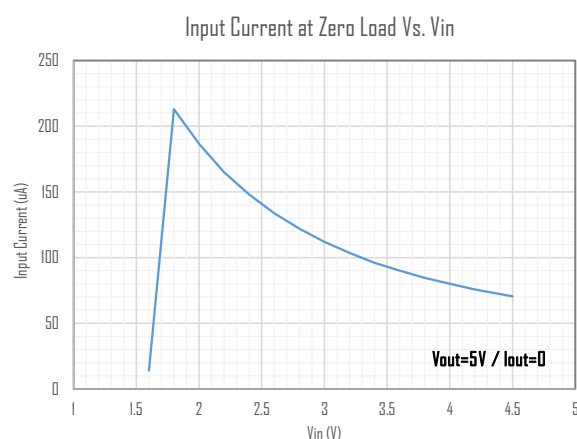

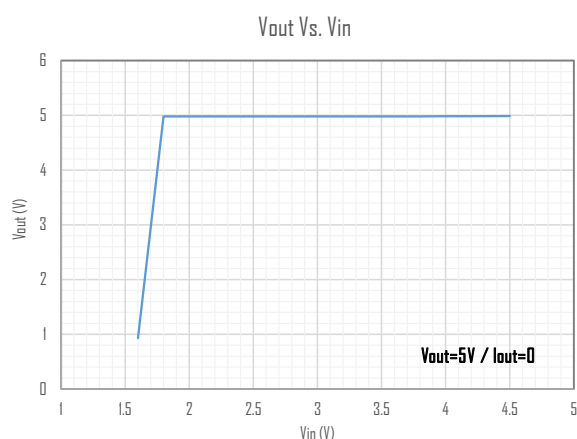

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Quiescent Current	EN=IN, No load, Not switching		40	80	μ A
Shutdown Supply Current at V_{IN}	V_{EN} = GND		0.5	5	μ A
V_{IN} UVLO at Rising			1.8		V
V_{IN} UVLO at Falling			1.5		V
Feedback Voltage		1.15	1.17	1.19	V
FB Leakage Current			0		nA
Switching Frequency		0.7	1	1.3	MHz
NMOS Switch On Resistance	I_{SW} = 100mA		150		m Ω
PMOS Switch On Resistance	I_{SW} = 100mA		120		m Ω
SW Leakage Current	V_{OUT} = 5V, V_{SW} = 0 or 5V, V_{EN} = GND			10	μ A
NMOS Switch Current Limit		2.2	2.8		A
Start-up Current Limit			1.5		A
Short Circuit Hiccup time	ON		3.5		ms
	OFF		75		ms
EN Input Current		-1	0	1	μ A
EN Input Low Voltage				0.6	V
EN Input High Voltage		1.5			V
Thermal Shutdown	Rising, Hysteresis = 25°C		160		°C

PIN DESCRIPTION

PIN #	NAME	DESCRIPTION
1	OUT	Output pin. Bypass with a 22 μ F or larger ceramic capacitor closely between this pin and GND
2	GND	Ground Pin
3	EN	Enable pin for the IC. Drive this pin high to enable the part, low to disable.
4	IN	Input Supply Voltage. Bypass with a 4.7 μ F ceramic capacitor to GND
5	FB	Feedback Input. Connect an external resistor divider from the output to FB and GND to set V_{OUT}
		$V_{OUT} = (R_1 + R_2) / R_2 \times 1.17 \text{ (V)}$
6	SW	Inductor Connection. Connect an inductor Between SW and the input.

TYPICAL CHARACTERISTICS

(Typical values are at $T_A = 25^\circ\text{C}$ unless otherwise specified.)

APPLICATION INFORMATION

Loop Operation

The ETA1038 is a wide input range, high-efficiency, DC/DC step up switching regulator, integrated with a 120mΩ Low Side Main MOSFET and 150mΩ synchronous MOSFET. It uses a PWM current-mode control scheme. An error amplifier integrates error between the FB signal and the internal reference voltage. The output of the integrator is then compared to the sum of a current-sense signal and the slope compensation ramp. This operation generates a PWM signal that modulates the duty cycle of the power MOSFETs to achieve regulation for output voltage.

The peak current of the NMOS switch is also sensed to limit the maximum current flowing through the switch and the inductor. The typical peak current limit is set to 2.8A. An internal temperature sensor prevents the device from getting overheated in case of excessive power dissipation.

Light Load Operation

Traditionally, a fixed constant frequency PWM DC/DC regulator always switches even when the output load is small. When energy is shuffling back and forth through the power MOSFETs, power is lost due to the finite RDSONs of the MOSFETs and parasitic capacitances. At light load, this loss is prominent and efficiency is therefore very low. ETA1038 employs a proprietary control scheme that improves efficiency in this situation by enabling the device into a power saving mode during light load, thereby extending the range of high efficiency operation.

Short-Circuit Protection

Unlike most step-up converters, the ETA1038 allows for short circuits on the output. In the event of a short circuit, the device first turns off the NMOS when the sensed current reaches the current limit. After V_{OUT} drops below V_{IN} the device then enters a linear charge period with the current limited same as with the start-up period. In addition, the thermal shutdown circuits disable switching if the die temperature rises above 150°C.

Down Mode ($V_{IN} > V_{OUT}$) Operation

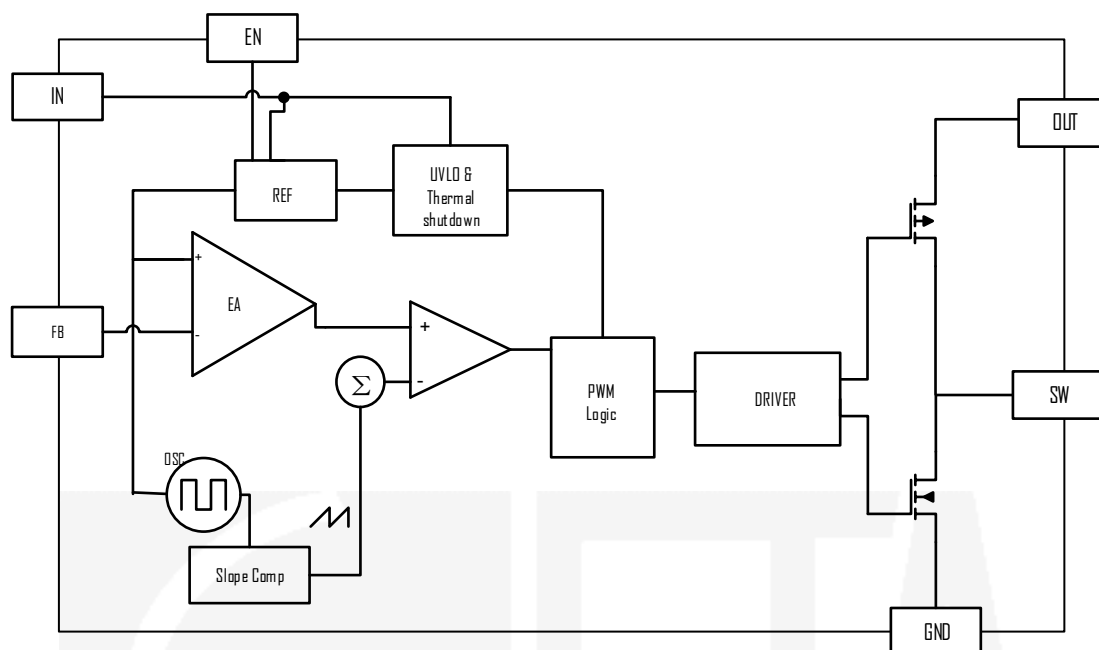

The ETA1038 will continue to supply the output voltage even when the input voltage exceeds the output voltage. Since the PMOS no longer acts as a low-impedance switch in this mode, power dissipation increases within the IC to cause a sharp drop in efficiency. Limit the maximum output current to maintain an acceptable junction temperature.

PCB GUIDELINES

A recommended PCB layout is shown on the right hand. Please place the output capacitors (Co1 and Co2) just besides the chip. And wire GND out underneath the IC body. And thus, the performance of ETA1038 is guaranteed, and a very compact PCB design is also achieved
